

Introducing the

TOMMYcarts[®]

Material Recovery System

The Tommy Cart System is an innovative process that transforms traditional methods of handling construction waste.

TOMMYcarts®

Material Recovery System

The system is an efficient, clean and safe way of collecting, tracking, and processing construction & demolition debris which eliminates the need, cost and skill set associated with specialty roll-off equipment.

The system is particularly suitable in metropolitan and urban areas where space is limited.

TOMMYcarts®

Material Recovery System

TOMMYcarts®

Material Recovery System

The Tommy Cart System is patented, proven and available for partnership and/or distribution business opportunities.

TOMMYcarts®

Material Recovery System

- A **cost-effective**, cleaner, safer & professional solution for Project Managers and Owners
- **Seam welded** to prevent leakage.
- **All steel construction** to prevent sidewall bulging and blowouts.
- **Safe and easy to maneuver**, 6" poly urethane caster wheels easily roll over cords, cracks and reduce floor marking.
- **Floor locks** prevent carts from rolling away while loading
- Safely **eliminates double-handling debris** on-site.
- Same **reliable Delivery Service** as Richard S. Burns & Co. roll-off dumpsters

Empty carts are delivered when full carts are picked up

TOMMYcarts®

Material Recovery System

Full steel construction to prevent sidewall bulging and blowouts

Bar Code for Tracking of Carts

Reinforced band for durability

Handles for secure grip

Seam welded to prevent leakage

Floor locks prevent carts from rolling while loading

6" polyurethane caster wheels easily roll over cords, cracks, and reduce floor marking
